

GLOBAL LUNG CANCER COALITION

The worldwide forum
to network, share
ideas and learn

GLCC goals

As the international voice of lung cancer patients, the Global Lung Cancer Coalition is committed to improving outcomes for all by placing the disease squarely on the international health agenda.

We provide information to help patients and their loved ones.

We also supply, evaluate and collate data to support research and effect changes in legislation and regulatory policies to optimise the treatment and care of people with lung cancer.

We have developed an interactive e-Atlas - an accessible online tool for researchers seeking to use

comparative data about the disease within member nations.

Data concerning lung cancer, treatments and outcomes are collated from polls carried out by IPSOS/MORI and by Populus.

The GLCC Newsletter provides regular updates of work carried out by member organisations worldwide.

We will accomplish our mission by ensuring that policy makers, medical professionals, the media and the general public recognise the serious nature of lung cancer and the need for immediate action to meet patient needs.

Who can join?

Membership of the GLCC is voluntary and for patient and professional organisations dedicated to improving lung cancer patient outcomes.

Membership is open to registered non-government, patient and professional organisations involved in the advocacy, support and care for lung cancer patients.

Generic cancer and respiratory organisations are also eligible for membership, if they have a clear lung cancer patient focus to their activities.

Organisations wishing to apply for membership can apply by completing the Membership Application as posted on the GLCC website www.lungcancercoalition.org or on the back of this leaflet.

GLCC members

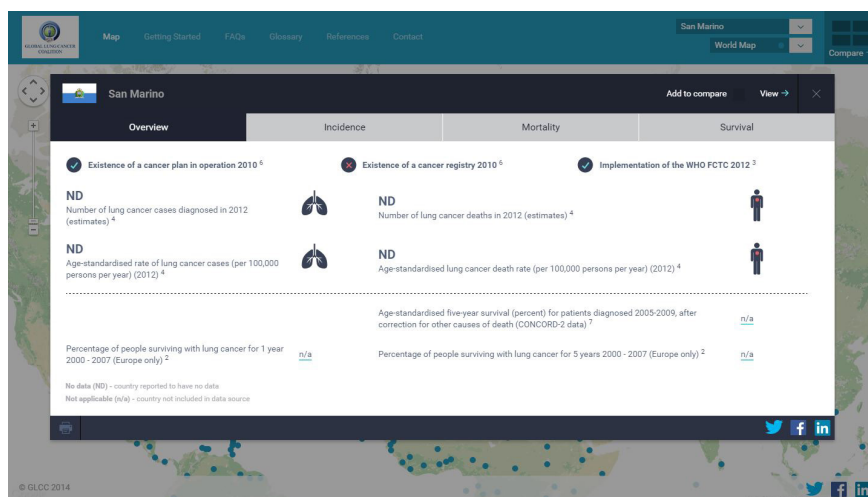

GLOBAL LUNG CANCER
COALITION

Established in 2001, the GLCC is comprised of non-government patient organisations from Africa, Asia, Australia/Oceania, Europe, North America and South America.

Lung cancer kills more people than any other cancer, yet in terms of research it is the most poorly funded.

It can affect anyone at any age and there has been a big increase in the number of women affected.

“The Global Lung Cancer Coalition promotes global understanding of the burden of lung cancer and the rights of patients to effective early detection, better treatment and supportive care.”

View the e-Atlas at www.lungcancercoalition.org

www.lungcancercoalition.org

“The strength of the Coalition rests in the commitment and influence of its members.”
